

## **AccurX - Practices currently using Windows 10:**

The CCG and CSU Digital teams have been working to deploy the AccurX software package to all of our GP Practice PC's to enable Video Conferencing and Messaging with patients during the current Covid-19 pandemic. The AccurX application itself has successfully been remotely deployed to all Windows 10 PC's within the estate with the deployment for Windows 7 PC's being in final stages of testing. Details for how to access the AccurX software is detailed below:

You should now have the AccurX icon on your desktop and this can be used to access the application, you will be prompted with the below on clicking the icon and registering for a new account (via the link below the continue button). If you have already registered, you can just login with your existing credentials.

Before the application can be used in your practice a member of staff in your practice will need to undertake the below simple steps to configure your clinical system to link in with the AccurX software

***Please note that you do not need to download the Chain install file, this has already been installed on your Windows 10 computers. Also note you if you are an EMIS Web practice the member of staff completing the below will need EMAS access:***

1. Go to <https://www accurx.com/get-chain>
2. Select your clinical system – either SystemOne or EMIS
3. Follow the instructions as prompted on screen.
4. For all support queries in relation to configuration or utilisation please contact [support@accurx.com](mailto:support@accurx.com)

***Should you have any additional queries or questions please do not hesitate to contact Martyn Godsell ([martyngodsell@nhs.net](mailto:martyngodsell@nhs.net)) who is the CCG's main point of contact for this Work-Stream.***
